DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The limitations "a heating device that supplies flue gas to the waste heat boiler, an air control valve for controlling the air entering the heating device, a feedback line to feed back flue gas to a circulation circuit, a flue flow rate control valve for controlling the rate flue gas is applied to the circulation circuit, wherein the heating device, heating device air control valve, flue rate flow control valve, and the slides allow auxiliary steam to be extracted from a low pressure evaporator by selectively controlling the high pressure evaporator and medium pressure evaporator in operating situations in which no exhaust gas is available from the gas turbine, including when the gas turbine is not in use or while the gas turbine is being started up or shut down" is not taught or disclosed in the prior art of record. The closest prior art of record Bruckner et al. USPN 5,365,730 discloses a combined cycle power plant where a combustor of a gas turbine engine supplies flue gas to an evaporator where the evaporator contains various stages, the plant further includes a feed water control valve 45 which is capable of controlling the steam generated in the particular steam loop; however, Bruckner et al. does not disclose a exhaust gas recirculation loop where the loop contains an auxiliary heater where the flue gas can be bled at a point in the evaporator such that steam can be selectively controlled during operating situations even when the turbine is not operating. Although the components such as air control valves, flue gas valves, feed water valves (slide valves) and flue gas recirculation are known in the art, the particular power plant

schematic as claimed would not have been obvious to one of ordinary skill in the art without the use of impermissible hindsight. The present invention lacks predictability because the claimed power plants has new and unexpected benefits where the ability to close off one or more of the evaporators allows the system to use the gas from the heating device and thereby continue to operate even during conditions where little to no exhaust gas is provided by the turbine.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
